

New AIDS theory

There are two theories which explain how HIV-viruses, which cause AIDS, could have passed from monkeys to man

AIDS carrier

The Gallo theory

The Gilks theory

Hundreds of years ago

Virus crossed to humans when hunters were cleaning carcasses

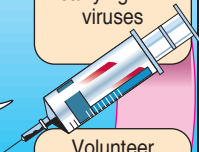

40 years ago

Blood taken from malaria-infected monkeys carrying HIV viruses

1950s

Virus spreads worldwide with rise of air travel

Volunteer prisoners

innoculated with monkey blood

1980s

AIDS appears in homosexual community
