

Intelligent vacuum cleans while you sleep

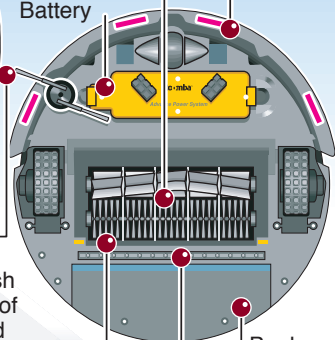

The **Roomba** robot vacuum cleaner uses intelligent navigation technology to move around a room, and can clean wood, tiles, linoleum and short-pile carpet. Now an upgrade is available which programmes the Roomba to clean while you are asleep or even away from home

Dirt detection sensors

Four infrared sensors

Battery

Edge cleaning side brush for base of walls and corners

Brushes pick up larger debris

Bagless particle bin and air filter

Vacuum picks up fine particles and pet hair

Built-in intelligence determines room size and adjusts run-time to ensure entire floor cleaned

Virtual wall: Sensors confine robot to defined area – e.g. single room

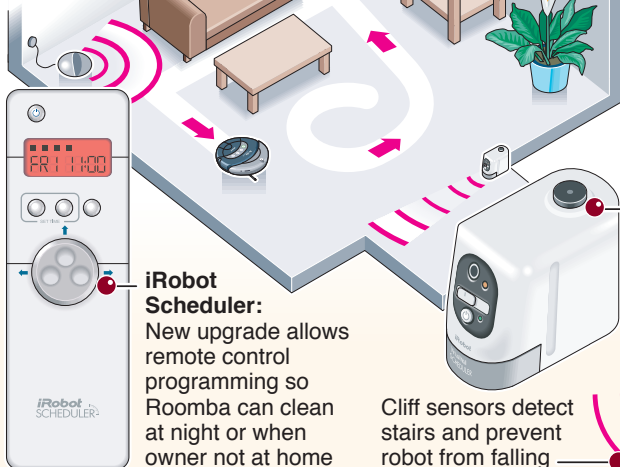

Cliff sensors detect stairs and prevent robot from falling

Serial port

Compact size – 9cm x 33cm – allows cleaning under furniture

Self-charging home base:

Infrared signal guides robot to base when cleaning finished or battery runs low. Recharges in three hours

iRobot Scheduler: New upgrade allows remote control programming so Roomba can clean at night or when owner not at home
