

Cigarette fears

The health risks from cigarettes described as *light* or *ultra-light* may be greater than those from *regular* because of the tendency of smokers to compensate and inhale more tar and nicotine

Filter vents:

Holes intended to dilute smoke with air can become blocked

Machine-measured tar yields

Ultra-light	6mg or less
Light	7-15mg
Regular	More than 15mg
EU upper limit (from 2001)	10mg
