North Korea threat leaves world on edge

A nuclear North Korea could decisively affect the stability of the region. Any shift in northern Asia's diplomatic and military alignment could threaten the delicate balance in an area where the interests of the United States, China, Japan, Russia and both Koreas collide

North Korea. 1998: Leader Kim Jong-il successfully test fires Taepodong-1

2 China: North Korea's sole ally. President Hu Jintao sees North as buffer

3 Russia: In recent vears President Vladimir Putin has cultivated cordial

missile over north Japan

Nov 2005: Kim boycotts six-nation talks to resolve Pyongyang's nuclear ambitions

between Beijing and

relations with Kim regime. U.S.-backed South Korea Kremlin now concerned over nuclear smuggling by Pyongyang over its 60km border with North Korea

Jul 2006:

Test launch of seven missiles

Oct 9: Nuclear test

4 Japan: Prime Minister Shinzo Ahe savs there will be no

change in

Japan's non-nuclear weapons policy. However, hardliners see test as excuse to scrap pacifist constitution and acquire nuclear firepower

Range of North Korea's Taepodona-1 missile

5 South Korea: Divided from North

since 1950-53 conflict - technically still at war. President Roh Moo-hvun is under domestic pressure to drop sunshine policy of peaceful cooperation with Pyongyang. Seoul abandoned atomic weapons programme in 1970s but might now consider reviving it for deterrence

United States: Has 50,000 troops in Japan and 30,000 in South Korea. President Bush is likely to accelerate deployment of missile defence shield, forcing further arms build-up by

both China and Russia. Both would feel threatened by an America impervious to missile strikes
