

Low-cost laptop

The first 1,000 laptops in the *One Laptop Per Child* project should soon reach children in the developing world as the machines undergo final testing before mass production starts in summer 2007

7.5-inch display can be turned 180 degrees

Wi-Fi antennas protect USB ports

Hardware: *Linux* operating system, 366Mhz with 128MB RAM – slower than original planned 500Mhz

Storage: 512MB flash memory

Graphics: *Dual-mode TFT display* has full colour mode or monochrome sunlight-readable mode

Power: Two-watt battery recharged by power adapter, instead of planned on-board hand crank

Cost: Upwards of \$150, but expected to drop to promised \$100 by 2008
