

Ferrari unveils its new California coupe

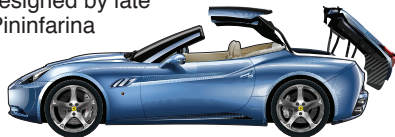

The California is a first-of-its-kind, all-aluminium production car, which debuts Ferrari's next generation engine technology. It is powered by a front-engined 4.3 litre V8 with direct fuel injection and dual-clutch gearbox

Engine sits between windscreen and front axle line

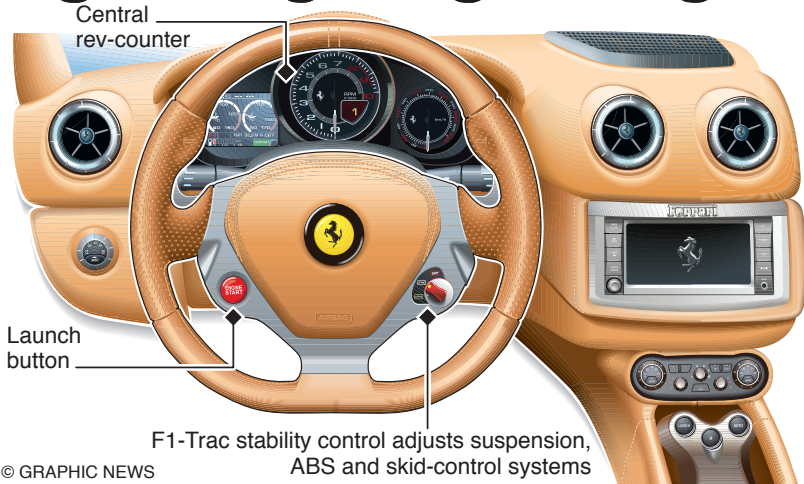

Carbon-ceramic brake discs

Wheelbase: 2,700mm
Coachwork designed by late Andrea Pininfarina

Central rev-counter

F1-Trac stability control adjusts suspension, ABS and skid-control systems
