

Apple unleashes speediest-ever iPhone

Apple's *iPhone 3G S* promises to be the most powerful iPhone to date, twice as fast as its predecessor and featuring a 3-megapixel camera, video recording, longer battery life and hands-free voice control

► **"S" for speed:** Latest iPhone packs **600MHz** processor and **256MB** memory, as opposed to 412MHz and 128MB of older model

► **Camera:** Up from 2 to **3 megapixels**. Includes autofocus and capture / edit of **VGA video** at 30 frames per second

► **Connectivity**
Supports **7.2Mbps** mobile broadband network for faster data speeds

► **Graphics**
Upgraded chip for faster, better-looking graphics in games and applications

► **Cost:** **\$199** (16GB), **\$299** (32GB).
Price of old iPhone 3G (8GB) dropped to **\$99**

► **Design:** New phone slightly heavier, uses greener materials. Screen has fingerprint-resistant coating

► **New apps**
Digital **compass**.
Voice control for making calls and playing tracks

► **Battery:** 5hrs 3G talk time, 9hrs WiFi internet use, 10hrs video, 30hrs audio

► **Software:** Over 100 new features such as **Cut, Copy and Paste**, **MMS** messaging, **Spotlight Search**, landscape keyboard and **Find My iPhone** service if phone is lost

Existing iPhone 3G users will pay premium to upgrade
