

Earthquake shakes Japan's nuclear confidence

The safety of Japan's nuclear industry has been called into question after the devastating earthquake that has left the country struggling to avert a nuclear meltdown at its *Fukushima Daiichi* plant. Japan has 55 reactors, which provide about one-third of its electricity

 Prefectures worst affected by earthquake / tsunami

Nuclear power plants

 Boiling water reactor (BWR)

 Pressurized water reactor (PWR)

4 Number of reactors
