

Apollo 11 engines to be recovered

Amazon founder Jeff Bezos has located the five F-1 rocket engines that blasted the *Apollo 11* moon mission into space. The world's most powerful single-chamber engines are submerged 4,300m below the Atlantic

F-1 SPECIFICATIONS

Thrust (sea level): **1,522,000-lb**

Weight dry: **18,500-lb (8,391kg)**

Combustion temperature:
5,970°F (3,298°C)

F-1 generated 32 million horsepower (23,800MW) and burned 6,000-lb (2,720kg) of kerosene and liquid oxygen every second

First stage burned for just two minutes 45 seconds
