

Much of world still without 4G coverage

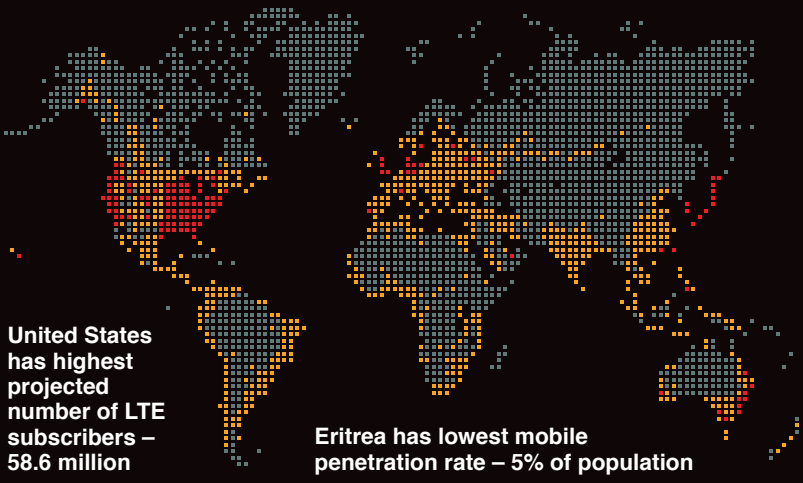

Almost four years after the first publicly available LTE (Long Term Evolution) service was rolled out, there are still relatively few places in the world where you can receive a 4G mobile signal

Mobile data connections

■ LTE

■ 3G

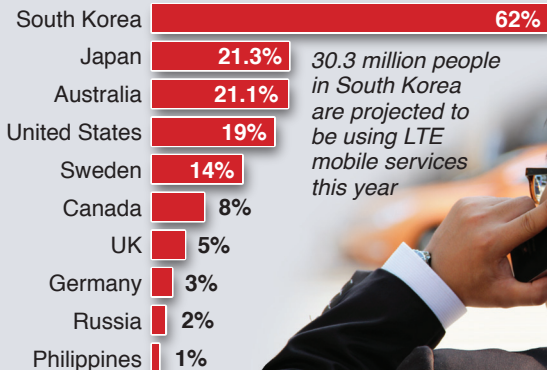

■ 2G or no service

United States
has highest
projected
number of LTE
subscribers –
58.6 million

Eritrea has lowest mobile
penetration rate – 5% of population

Most LTE subscriptions by country population, 2013 projection

30.3 million people
in South Korea
are projected to
be using LTE
mobile services
this year
