

Apple Watch facing possible launch delay

The intricate and futuristic Apple Watch could face manufacturing delays after *GT Advanced Technologies*, makers of the watch's toughened *Sapphire Crystal* screen, unexpectedly filed for bankruptcy

Two sizes available

38mm or 42mm

Digital crown and Home Button:

Roll to zoom in and out of apps, scroll display or make nimble inputs – without obscuring screen

Friends button: Connect with Apple Watch wearers and use *Digital Touch* to send gentle taps or simple sketches

Release:
Feb 2015,
in limited numbers

Screen: Flexible Retina display laminated onto *Sapphire Crystal*. Can detect light tap or deep press of finger. Several watch faces built in

Loudspeaker: Can create discreet and subtle sounds

Taptic Engine: Creates haptic feedback*, in conjunction with loudspeaker

Battery: Believed to last one day between charges

Charger: Magnetic rear connection

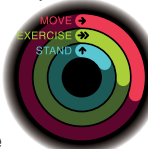

Watch strap release

Speaker slot

Microphone

Sensors:

Infra-red LEDs and photo sensors detect wearer's pulse. Can provide picture of daily activity when linked to iPhone

S1 chip: Entire computer miniaturised into one chip, encased in shock-proof shell to protect electronics
