

Russia to build more nuclear reactors in Iran

Russia has signed a contract to build two more nuclear reactors in Iran, possibly followed by another six, in a move intended to cement closer ties between the two countries

BUSHEHR NUCLEAR PLANT

Bushehr Phase II: Two new reactors to be located at Iran's first Russian-built nuclear plant, which opened in 2013. Construction to be monitored by **International Atomic Energy Agency**, according to Russian nuclear power company **Rosatom**. Russia will supply uranium fuel and retrieve it after use – deal intended to stop Iran using spent fuel to build atomic weapons

Bushehr 4 and 5: Options for two additional reactors at same site

Four more reactors: Could be built at undetermined site in Iran

Future plans: Iran wants total of 20 nuclear plants, including four at Bushehr, to reduce its dependence on oil and gas
