

# Meet the new Pebble Time smartwatch

Pebble, the American startup that makes smartwatches using cash raised on Kickstarter, has introduced the Pebble Time. The watch features a low power colour e-ink display that affords the device a week-long battery life

**Curved profile**  
Conforms to wrist more comfortably than previous Pebble watch

**Strap**  
Fits any standard 22mm watch band

**E-ink display**  
No touch interface. Similar to Kindle e-reader screen but with palette of 64 colours

**Interface**  
Features perky, cartoon-style animations and new **Timeline** control system

**Past button**

**Present button**

**Future button**

*Notifications and apps run in scrollable, strip. Move down for upcoming events and up for past ones*

**Microphone**  
Reply to messages or record voice notes

## ADDITIONAL FEATURES

- Up to 7 day battery life – far longer than 19 hours\* of **Apple Watch**
- Tactile buttons for easy clicking
- Water resistant and durable
- Silent vibrating alarms
- Always-on, daylight readable screen with backlight for low light viewing
- Basic motion detector counts your steps
- Language and international character support, including Chinese

Connects to iOS 8 on iPhone 4S upwards and Android 4.0 upwards via Bluetooth, alerting you to calls, emails, messages and alerts
