

Global marine population halved since 1970

Populations of marine wildlife have plummeted by half over the past 40 years, with some species suffering even greater losses due to habitat loss, overfishing, rising sea temperatures and worsening ocean acidity

HABITATS AND POPULATIONS

CORAL REEFS

50% decrease over last 30 years

SEAGRASS

30% decline over last century

MANGROVES

20% loss between 1980 and 2005

SEA CUCUMBERS

98% decline in Galapagos between 1993 and 2004

SHARKS & RAYS

25% of sharks, rays and skates threatened with local extinction

MARINE TURTLES

4 of 7 sub-populations of leatherbacks critically endangered
