

Search for Nefertiti in Tutankhamun's tomb

A search for the resting place of the pharaonic Queen Nefertiti has revealed possible “organic material” hidden in the tomb of Tutankhamun

BURIAL CHAMBER: New ultra-high-resolution scans have revealed fissures which could indicate presence of two sealed doors in west (1) and north (2) walls

Painting on north wall believed to depict boy king (*left*) completing death ritual for Nefertiti (*right*)

Egyptologist Nicholas Reeves suggests Tutankhamun, who died 3,000 years ago aged 19, was rushed into outer chamber of what was originally Nefertiti's tomb
