

Missing MH370 plane may be further north

Wreckage from Malaysia Airlines Flight MH370 could be as far as 500km north of the current search area, according to new debris drift analysis conducted by Italian scientists. The hunt for the jet will soon be suspended if it is not found in the 120,000sq km search area

DRIFT SIMULATION

- Discovered debris used to weight outcomes of multiple simulations
- Distributions for floating debris as of Jan 2015
- Distributions for floating debris as of May 2016

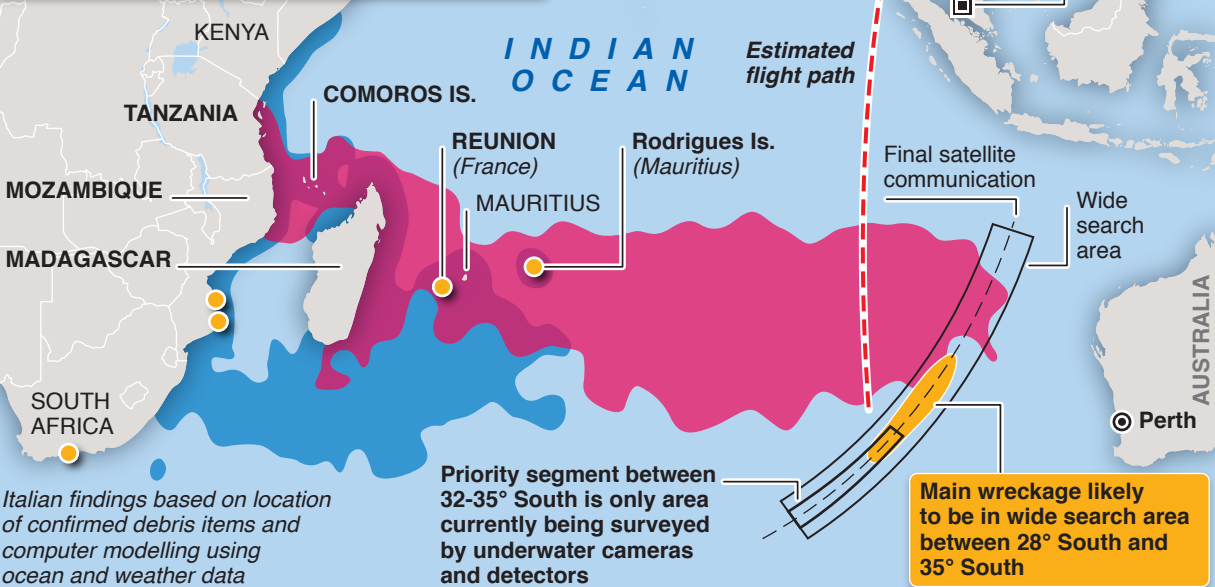

Results indicate most probable locations to find additional washed up debris are Tanzania and Mozambique, and islands of Madagascar, Réunion, Mauritius and Comoros

Mar 8, 2014: Flight **MH370** vanishes en route from Kuala Lumpur to Beijing, with 239 passengers and crew on board

Last military radar contact with MH370

Kuala Lumpur
MALAYSIA

Italian findings based on location of confirmed debris items and computer modelling using ocean and weather data

Priority segment between 32-35° South is only area currently being surveyed by underwater cameras and detectors

Main wreckage likely to be in wide search area between 28° South and 35° South
