

Super Blood Wolf Moon

North and South America, and parts of Western Europe and Africa will see the combination of a total lunar eclipse and a supermoon in January, the last such event until 2022

STAGES OF ECLIPSE

All times GMT

WOLF MOON:

Native Americans used this name for January full moon, when hungry wolves howled outside villages

BLOOD MOON: Some sunlight is refracted through Earth's atmosphere, giving moon deep red glow

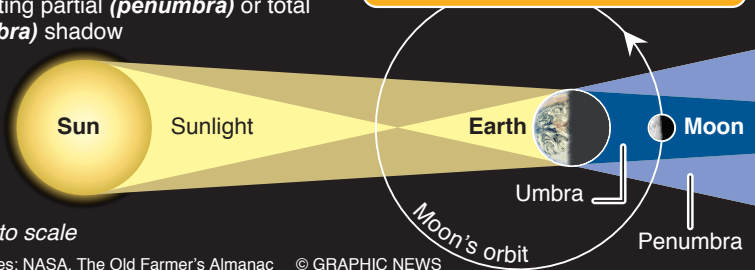

EVENING OF JAN 20

MORNING OF JAN 21

TOTAL LUNAR ECLIPSE: Earth blocks sunlight usually reflected by moon, creating partial (**penumbra**) or total (**umbra**) shadow

SUPER MOON: Occurs when full moon is at closest point to Earth, appearing bigger and brighter than usual
