

Hottest years on record

The past decade was the hottest on record, and 2019 was the second-warmest year ever – just 0.04 degrees Celsius shy of the record set in 2016, and nearly 1°C higher than the 20th-century average

Global average surface temperatures °C

(relative to average 1951-80)

2019: Monthly divergence, °C (relative to mean 1980-2015)
