

# Age-related risks for coronavirus disease

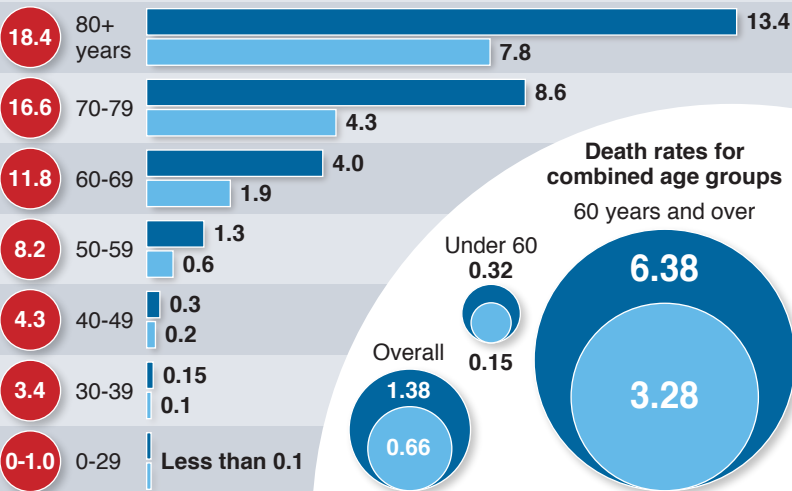

The first comprehensive estimates of hospitalisation and death rates from coronavirus disease (Covid-19) in mainland China have revealed a considerable increase in risk for patients from middle age

## ESTIMATED COVID-19 HOSPITALISATION AND DEATH RATES (%)

● Proportion of all infections that require hospitalisation\*

■ Death rates from confirmed cases†

■ Death rates from all infections, including undiagnosed cases with mild symptoms‡

\*Estimated from 3,665 cases reported in mainland China to Feb 8, 2020

†Based on 70,117 confirmed cases in mainland China from Jan 1 to Feb 11, 2020

‡Combines confirmed case data with information on infection prevalence among those people returning home from China on repatriation flights
