

# Impact of climate crisis on global ice

The Earth has lost 28 trillion tonnes of ice from its surface since 1994, according to a study by UK scientists who warn that sea level rises could reach a metre by the end of the century

**GLOBAL ICE MASS CHANGE, 1994-2017 (trillion tonnes)**

**28 trillion tonnes lost**  
Enough to cover entire surface of UK with 100m-thick layer of ice
