

# Energy demand growth slows

World primary energy consumption rose by 1.3% last year, much weaker than the 2.8% growth seen in 2018. Growth was driven by renewables, while demand for coal declined for the first time since 2015

World consumption (Exajoules\*, change on 2018)

World's largest consumers (Exajoules)

000 Carbon dioxide emissions (2019, million tonnes)

\*1 exajoule = 277.8 million megawatt hours
