

Motoring roadmap to an electric future

Automakers are switching production from internal combustion engines to battery-powered electric vehicles, in the biggest shake-up to the industry since the car's invention in 1885

Volkswagen's ID.3 electric car under production in Germany

Note: Price of electric cars not forecast to fall to level comparable to that of petrol engines until 2025-2030. *Will stop making cars with polluting emissions – has not specified if all will be electric
