

La Palma volcano increasingly dangerous

The eruption of the Cumbre Vieja volcano on the Spanish island of La Palma is showing no signs of weakening

LA PALMA ERUPTIONS

Jun 24, 1949: 60mcm of lava released in 36-day eruption. Three vents send lava down east and west sides of island, into sea

Oct 26, 1971: 40mcm of lava released in short eruption (24 days).
Other known eruptions:
1470, 1585, 1646, 1677, 1712
