

# Did two asteroids kill the dinosaurs?

A newly discovered undersea crater off the coast of West Africa is leading scientists to wonder whether the dinosaurs were wiped out by more than one asteroid 66 million years ago

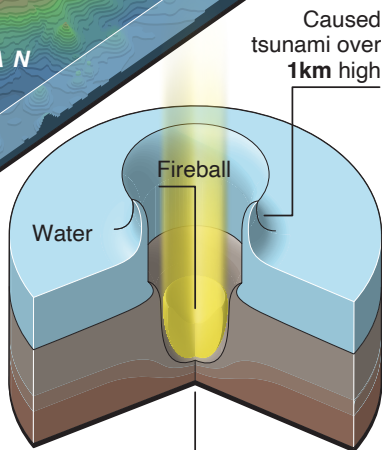

Both asteroids hit Earth 66 million years ago

**Chicxulub Crater**  
Diameter: 180km

**Nadir Crater**  
Diameter: 9km

Simulations suggest crater was created by collision of 400m-wide asteroid in 500-800m of water
