

# Extreme heat to make regions uninhabitable

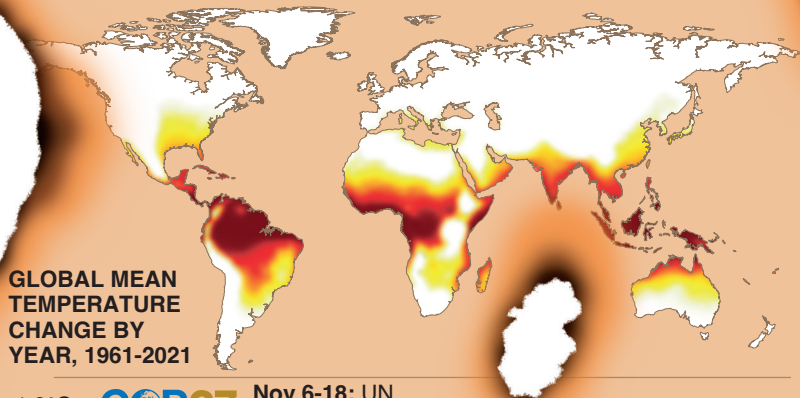

Heatwaves are set to become so extreme that in parts of the world they will exceed human physiological and social limits

2022: Third of global population exposed to deadly heat

2100: Half of all people affected

**WORLD ON FIRE:** Number of days projected to exceed potentially deadly heat levels per year by 2100

**GLOBAL MEAN TEMPERATURE CHANGE BY YEAR, 1961-2021**
