

# World's iconic glaciers to vanish by 2050

Some of the world's most famous glaciers are set to disappear by 2050 due to global warming – whatever the temperature rise scenario, the UN reports

Glacier on  
Mt Kilimanjaro

Glaciers  
in one third of  
UNESCO's 50 World  
Heritage sites will melt

Remaining  
glaciers in  
other two thirds  
could be saved  
only if global  
warming  
is limited to 1.5°C

## AMERICAS

- 1. Nahanni National Park (NP), **Canada**
- 2. Yellowstone NP, **U.S.**
- 3. Yosemite NP, **U.S.**

## EUROPE

- 4. The Dolomites, **Italy**
- 5. Durmitor NP, **Montenegro**
- 6. Pyrenees Mont Perdu, **France, Spain**
- 7. Swiss Tectonic Arena Sardona, **Switzerland**

## AFRICA

- 8. Kilimanjaro NP, **Tanzania**
- 9. Mount Kenya NP / Natural Forest, **Kenya**
- 10. Rwenzori Mountains NP, **Uganda**
- 11. Virunga NP, **DR of Congo**

## SOUTHEAST ASIA

- 12. Lorentz NP, **Indonesia**

## ASIA

- 13. Huanlong Scenic and Historic Interest Area, **China**
- 14. Hyrcanian Forests, **Iran**
- 15. Natural System of Wrangel Island Reserve, **Russia**
- 16. Putorana Plateau, **Russia**
- 17. Virgin Komi Forests, **Russia**
