

# Earth's core may have reversed its spin

Earth's spinning core may have started to rotate in the opposite direction, according to scientists at Peking University in Beijing

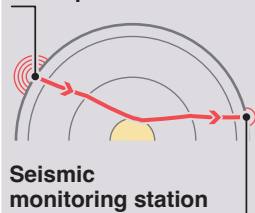

## COMPOSITION OF OUR PLANET

## EARTHQUAKES

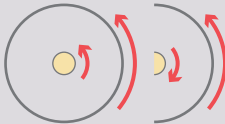

By analysing seismic waves caused by earthquakes, and how they travel through Earth, scientists have been able to see “gradual turning-back of inner core”

### Earthquake

## ROTATION

Core has been rotating in same direction as Earth, known as **super-rotation**, but may be starting to reverse – **sub-rotation**
