

Apple iPhone 15 Pro leaks

Design leaks out of China suggest the next-generation *iPhone 15 Pro* will feature a unified volume button and a mute button, rather than a switch – the latter present since the original iPhone in 2007

Leaked CAD model: Suggests *volume buttons* replaced with one elongated solid-state button, likely using *Taptic Engine* to mimic click sensation

Mute switch and power button replaced with solid-state buttons

Bump

Shallower camera bump thanks to periscope zoom lens configuration

Titanium chassis

EXPECTED FEATURES

More power-efficient OLED display

A17 chip – expected to be first A-series chip built on 3-nanometer process (smaller chip size)

8GB RAM, up from 6GB

Sep 2023: Apple set to announce iPhone 15 series

USB-C port replaces *Lightning port* due to new regulatory requirements in Europe

New burgundy colour option
