

# Barry the dinosaur up for auction

Barry, the skeleton of a rare and exceptionally well-preserved 150-million-year-old plant-eating dinosaur, goes under the hammer in Paris

**BARRY:** Adult skeleton of *Camptosaurus*, part of *Iguanodon* family, among earliest groups of dinosaurs discovered

Found in fossil-rich **Morrison Formation**, Wyoming, in 1990s and named after palaeontologist **Barry James**, who unearthed and later restored it

Length: 5m  
Height: 2.1m

Barry  
expected  
to fetch up  
to \$1.28m  
in Oct 20  
sale

**2022:** Further restored in Italy by **Zoic** laboratory and paleontologists from **University of Bologna**

Around 80% of bones are original – 90% of skull remains intact
