

# Hezbollah's vast missiles arsenal

Hezbollah's firepower is believed to number around 150,000 rockets including hundreds of ballistic missiles capable of putting most of Israel within its reach

■ **Fateh-110:** Iranian-made ballistic missile equipped with GPS guidance, can carry 500kg high explosive warhead. **M-600** is similar, Syrian-made version.

**Hezbollah likely has hundreds of both types**

■ **Zelzal-2:** Iranian variant of Soviet **FROG 7** artillery rocket. Less accurate but 600kg warhead can target deep within Israel.

**Group may have up to 200**

■ **Khaibar-1:** Syrian-made 302mm rocket with 150kg anti-personnel warhead. **Unguided but more accurate than most Hezbollah rockets**

■ **Fajr-5:** 333mm Iranian-designed rocket with 90kg warhead. **Mobile launchers carry four rockets each**

■ **Katyusha:** Inspired by Soviet designs, including **Grad** multiple rocket launcher. **Makes up majority of Hezbollah's rocket force**
