

Fossil fuel pollution kills 5 million people a year

Air pollution from fossil fuel use likely kills more than 5 million people worldwide every year, according to a new report by the *British Medical Journal*

POSSIBLE REDUCTIONS IN ANNUAL DEATHS FROM AIR POLLUTION

(if removing fossil fuel-related and anthropogenic emissions, %)

- 50% reduction in fossil fuel air pollution
- No fossil fuel air pollution
- No anthropogenic air pollution*
- 95% confidence interval

Annual deaths linked to long term exposure to fossil fuel pollution†
