

# World to warm by over three degrees

A new report from the UN declares that if current environmental policies are maintained, the world could warm by a catastrophic 3.1°C this century

**PROJECTIONS OF GLOBAL WARMING:** Forecast peak temperatures over 21st century (°C, relative to pre-industrial levels), under different country pledge-based scenarios

Even rise of 1.9°C would be considered disaster, as planet's temperature is currently up by 1.1°C, with effects such as extreme weather and rising sea levels already being felt worldwide
