

China to slash greenhouse gas emissions

For the first time, the world's biggest GHG producer has pledged to cut emissions by 7-10% from peak levels – and could even exceed that – but a 30% reduction is the minimum needed to hit the 1.5°C temperature target

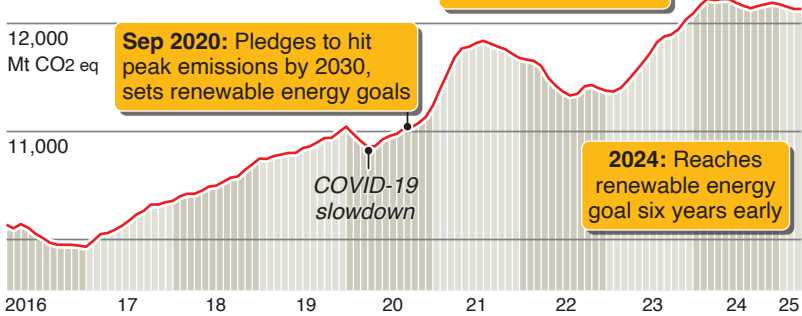

SHARE OF GLOBAL EMISSIONS 2024

Excluding land use, forestry

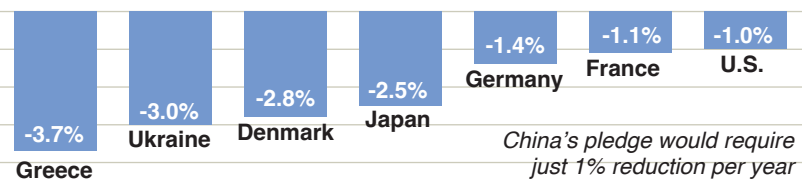

CHINESE EMISSIONS

Could China over-achieve?

OTHER COUNTRIES AFTER PEAK EMISSIONS

Annual emissions reduction

China's pledge would require just 1% reduction per year
