

# China's global reach in green technology

Despite being one of the world's biggest polluters, China now leads in exporting renewable technology – positioning itself as a climate leader amid intensifying U.S. isolationist policies

China accounts for 60% of the world's mass-manufactured green technologies, with emphasis on research and development, investment, and innovation

## CHINA CLEANTECH EXPORTS (Monthly export value, U.S. \$bn)

2024 exports alone are expected to cut global carbon emissions by 1%, according to analysis for Carbon Brief
