

Electrical grids are under stress

Surging demand for electricity around the world caused by a growing number of AI data centres and electric cars, is stressing networks and affecting the economies of countries that can't keep up

ELECTRICITY SYSTEM STRESS INDEX

Early 2000s: Stress from increasing industrialisation, rapid economic growth, rising living standards and arrival of mobile phones

Early 2020s: Countries are racing to build infrastructure needed to support electrical demands of cutting edge technology
