U.S. bucks trend with soaring coal power

The U.S. was the only major economy to substantially increase coal-fired electricity generation in 2025, the burning of which is a key contributor to planet-warming greenhouse gas emissions

CHANGE IN COAL ELECTRICTY GENERATION, 2025

Terawatt-hours (1 TWh = 1 trillion watt-hours)

U.S. President Trump consistently labels climate change a “hoax” or “con job”
