Ebola outbreak spreads in DR Congo

The World Health Organisation has warned that Ebola is spreading faster in the Democratic Republic of Congo than health workers can respond, and neighbouring countries are at high risk from the disease

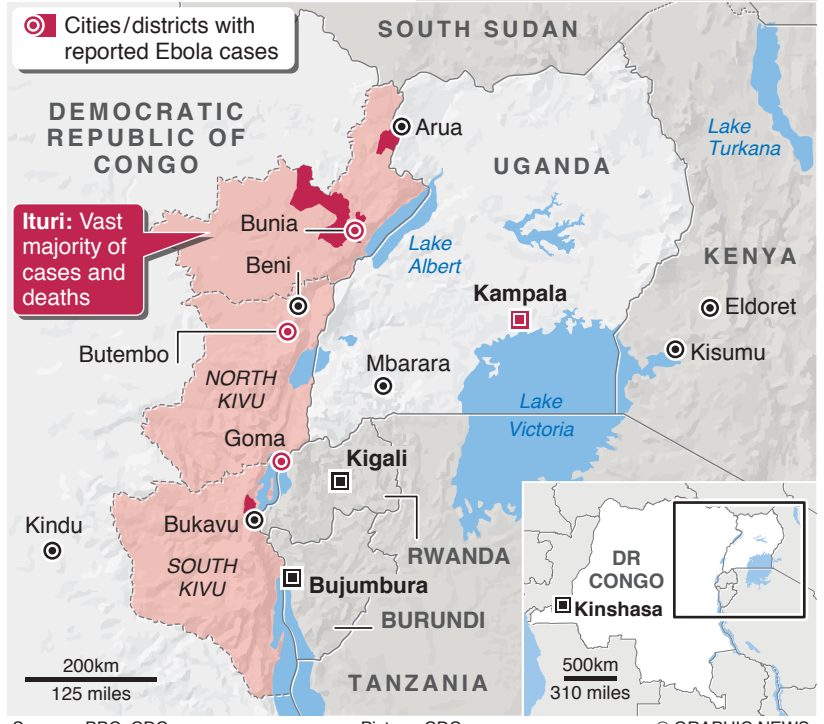

Situation as of May 26

- **DRC:** 906 suspected and 105 confirmed cases, 223 suspected and 10 confirmed deaths
- **Uganda:** Seven confirmed cases and one confirmed death
- **Strain:** Bundibugyo – virus has no approved vaccine or treatment. Death rates range from 25-50%
- **Transmission:** Spreads between people through infected bodily fluids

Ebola virus

- **Symptoms:** Include fever, headache and fatigue, followed by vomiting, diarrhoea and bleeding
