World's oceans record hottest June ever

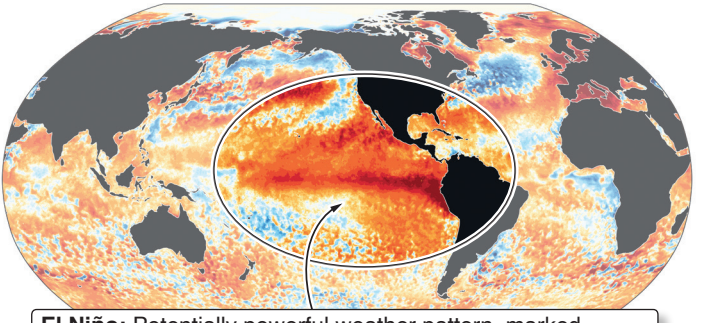

A record-high global sea temperature in June is pushing the world into "uncharted territory" scientists warn, as climate change and El Niño raise the risk of more extreme weather ahead

DAILY SEA SURFACE TEMPERATURE FOR 60°N TO 60°S *(Celsius)*

SEA SURFACE TEMPERATURE ANOMALY *(Jun 29, Celsius)*

El Niño: Potentially powerful weather pattern, marked by unusually warm Pacific waters, could push ocean and atmospheric heat even higher in 2026 and into next year
