Earth's health to be recorded by black box

Rouser Lab is building an "indestructible, self-powered" monolithic doomsday tracker in Australia, for future generations – designed to document humanity's spiral into environmental destruction

Rendering of how device should look in situ

EARTH'S BLACK BOX

Due: **Dec 2026**

Earth's Black Box: Built just west of town near remote airfield

Toughened glass protects **solar panels**

Stainless steel backing sheet

Concrete roof panel

Servers Store masses of environmental data sets from space agencies, weather agencies, and universities – continuously gathering statistics to form Earth index

Power room Manages solar and **geothermal** energy sources

Inner structural frame

Concrete inner shell layer

Steel panels *(will rust to blend more into landscape)*
