Indonesia volcano eruption halts flights

Some 270,000 passengers are stranded across Indonesia after a volcanic eruption grounded more than 2,000 flights and forced airports to suspend operations

- Volcanic ash from **Mount Anak Krakatau**, which means Child of Krakatoa, reached as high as 15,000m
- Volcano has been sporadically active since it emerged from sea after 1883 eruption of Mount Krakatoa
- Eruption in 2018 caused partial collapse of volcano, triggering huge tsunami which killed over 400 people
